

I. Product Overview

Our company mainly sells two product series: **Bluetooth Low Energy (BLE) modules and Bluetooth Low Energy beacons**. Both products adopt low-power Bluetooth communication technology and feature core characteristics such as low power consumption, stable transmission, and wide coverage. Among them, the Bluetooth Low Energy module is suitable for the integration of Bluetooth communication functions of various smart devices, and can realize core functions such as data collection and instruction transmission. Bluetooth low power beacons are suitable for scenarios such as indoor positioning, asset tracking, and information push, providing efficient wireless communication support for Internet of Things applications.

Manufacturer: **Shenzhen Holyiot Technology Co.,LTD.**

II. Product Instructions and Usage Restrictions

2.1 Instructions for Use of Low-Power Modules

2.1.1 Operating Steps

- 1. Preparatory work:** Confirm that the module model matches the application equipment, and prepare the power supply, connection cables and supporting development tools that meet the requirements (if applicable).
- 2. Hardware connection:** In the power-off state, connect the power pins (VCC, GND) of the module to the corresponding power interface of the device, ensuring that the positive and negative poles are correct. According to the communication requirements, connect communication pins such as TX and RX (for specific pin definitions, please refer to the product pin diagram).
- 3. Parameter Configuration:** Configure the Bluetooth name, communication baud rate, broadcast interval, connection password and other parameters of the module through the accompanying development tools or AT commands.
- 4. Function Test:** After power-on, the module enters the normal working state. Search for the Bluetooth name of the module through the serial port command or the accompanying APP, establish a connection, and then conduct data transmission tests to confirm that the function is normal.

2.2 Instructions for Using Low-Power Bluetooth Beacons

2.2.1 Operating Steps

1. Power installation: Open the beacon housing (if configured), place the battery that meets the specifications into the battery compartment, and ensure that the positive and negative poles are installed correctly.

2. Parameter configuration: Connect the beacon through the accompanying configuration APP and set parameters such as the beacon broadcast interval, transmission power, UUID, Major/Minor values, etc. (For specific configuration procedures, please refer to the operation guide of the APP. You can contact **sales-aliexpress@holyyiot.com** to obtain the operation instructions.)

3. Installation and Fixation: Select an appropriate installation location based on the application scenario (such as walls, ceilings, or asset surfaces), and fix the beacon using double-sided tape or other fixation methods to ensure a firm installation without any obstructions affecting signal transmission.

4. Work Test: After installation is completed, the beacon will automatically enter the broadcasting state. Use a Bluetooth device to search for the beacon signal and confirm that the signal strength and broadcasting stability meet the requirements.

(Note: This beacon is a semi-finished product. The program that comes with the factory is only used to test whether the beacon module hardware is normal and does not have actual application functions.) If specific application scenario requirements need to be met, users should write and burn the corresponding firmware program by themselves.

2.3 Usage Restrictions

1. Communication distance limitation: The communication distance of the product is affected by the usage environment. The communication effect is best in an open and unobstructed environment. The actual communication distance may vary due to factors such as obstructions, electromagnetic interference, environmental humidity and the performance of supporting equipment. The specific distance shall be subject to the specification sheet of the corresponding product. When in use, the installation position should be reasonably planned to ensure communication quality.

2. Working environment restrictions: The working environment of the product must meet the basic requirements of being clean, dry, and free from strong interference. The specific applicable temperature and humidity range varies depending on the

product model. For detailed parameters, please refer to the corresponding product specification sheet. Using beyond the compatible range may lead to a decline in product performance, malfunction or damage.

3. Power usage restrictions: Only power supplies or batteries that meet the product specifications must be used. It is strictly prohibited to use inferior power supplies or reverse power supply, otherwise the product will be damaged and may cause safety risks.

4. Software compatibility restrictions: The Bluetooth Low Energy module must be compatible with devices or systems that support BLE 4.0 or above. Please confirm the Bluetooth version compatibility of the accompanying device before use.

iii. Warning/Safety Information

Warning

1. This product is only applicable within the specified working voltage range (for specific parameters, please refer to the product specification sheet). It is strictly prohibited to use it beyond the voltage range, otherwise it may cause product damage, short circuit and even pose a fire risk.
2. Installation, disassembly and wiring operations must be carried out when the power is off to avoid electric shock or product failure caused by live operation.
3. Do not use this product in extreme temperature, humidity, dust or corrosive gas environments, unless the product specification clearly indicates that it has the corresponding protection level (such as IP67). Such environments will affect product performance, shorten service life and even cause safety hazards.
4. The product is a precision electronic component. Please do not subject it to violent impact, drop or disassembly. Disassembly may damage the internal circuit structure and cause the product to fail.
5. Please place the product out of the reach of children to prevent accidental operation or ingestion of small components by children, which may cause safety accidents.
6. When the product is discarded, please sort and recycle it in accordance with the local electronic waste disposal regulations. Do not discard it at will to avoid polluting the environment.

IV. Compliance Mark

This product complies with the relevant regional regulations. The compliance marks are as follows:

V. Other Explanations

1. Technical support: If you encounter any problems during the use of the product, please contact us for feedback. Contact information: sales-aliexpress@holymiot.com

2. Version Update: The content of this manual may be updated according to product upgrades. For the latest version, please log in to the manufacturer's official website for inquiry. www.hyyunjia.com
